Suresh played a pivotal role in the sales and product organizations at these companies. Suresh holds a Masters Degree in Computer Science from New Jersey Institute of Technology.

Description de la société / Description of the company

Bluenog was formed in 2006 to address the growing needs of companies looking to leverage best-fit web solutions using both Open Source and Commercial software.

At Bluenog, our mission is to deliver practical solutions that integrate commercial and open source technologies to meet our customers' unique needs. Our customers don't worry about whether our solutions are going to work. They no longer jump through hoops trying to get their disparate technologies to work together.

Instead, our customers enjoy the best of both worlds: commercial software's rich functionality, reliable service, support and upgrades combined with open source software's agility, responsiveness and team-building development approach.

To accomplish our mission, Bluenog:

- Offers commercial products, based solely on leading open source CMS, open source portal and open source BI projects, enhanced with integration, support and indemnification

- Forges strong **partnerships** with both commercial technology leaders and Open Source organizations

- Maintains deep technology expertise and broad implementation skills

- Provide end-to-end **consulting capabilities** from architecture, best practices and strategy to post implementation needs

Keeps all this simple so we deliver real business value as quickly and seamlessly as possible

Technologies, produits et services / Technologies, products and services

Bluenog ICE

Bluenog ICE is an integrated suite of content management, portal and business intelligence software. It is an Integrated Collaborative Environment that leverages Web 2.0 technologies and accelerates enterprise application development. Its unified framework simplifies administration and security. It also provides ready integration with third party products. Bluenog ICE consists of three tightly integrated modules:

- Bluenog CMS:** an Enterprise Content Management (ECM) system built on open source CMS projects that securely creates, manages, publishes and repurposes a wide-range of content for web, print and application access

- Bluenog RichPortal:** a Rich Internet Application (RIA) portal development environment built on open source portal projects that gives users a highly customizable interactive experience with secure access to dynamic content, reporting functionality and enterprise applications

- Bluenog BI:** a powerful tool built on open source BI projects to design, view, distribute and interact with secure reports based on enterprise-wide data

Services

Bluenog offers a broad range of consulting, technical support, and education services to ensure our customers' success. Whether you're implementing Bluenog products or integrating your existing application infrastructure investments, Bluenog can help.

- Bluenog Solutions Group (BSG)** provides end-to-end consulting based on a proven **Solutions Methodology** to address your architecture and design, development, deployment and post-implementation.

- Education** – Choose from a wide-range of informative courses that will help you get the most from your Bluenog products and solutions.

- Customer Support** - Skilled support personnel are available to answer your support questions about the Bluenog products you're using in your environment.
